

Homework

Task 1) Study different ways to run JS program and their requirement (through browser, console, snippets, VS Code)

Task 2) Write a JS programs for various arithmetic and logical operations with following type of operands

For First Operand Number

- A) Number, Number
- B) Number, String
- C) Number, Boolean
- D) Number, Null
- E) Number, undefined

For First Operand String

- A) String, Number
- B) String, String
- C) String, Boolean
- D) String, Null
- E) String, undefined

For First Operand Boolean

- A) Boolean, Number
- B) Boolean, String
- C) Boolean, Boolean
- D) Boolean, Null
- E) Boolean, undefined

For First Operand null

- A) Null, Number
- B) Null, String

- C) Null, Boolean
- D) Null, Null
- E) Null, undefined

For First Operand null

- A) Undefined, Number
- B) Undefined, String
- C) Undefined, Boolean
- D) Undefined, Null
- E) Undefined, undefined

Task 3) Write a JS program to practice on different type of operators in JS

Task 4) Write a JS program to understand the concept of differentiate between var, let and const variable declaration.

Refer following code

1)

```
var a=10
console.log(a) //a=
var a=20
console.log(a) //a=
function demo1()
{
    var a=30
    console.log(a) //a=
}
demo1()
console.log(a)//a=
```

2)

```
let a=10
```

```
console.log(a) //a=
```

```
a=20
```

```
console.log(a)//a=
```

```
function demo1()
```

```
{
```

```
    let a=30
```

```
    console.log(a) //a=
```

```
}
```

```
demo1()
```

```
console.log(a)//a=
```

3)

```
{
```

```
    var a=20
```

```
    console.log(a)
```

```
}
```

```
console.log(a)
```

4)

```
{
```

```
    let a=20
```

```
    console.log(a)
```

```
}
```

```
console.log(a)
```

5)

```
{
```

```
const a=20  
console.log(a)  
}
```

```
console.log(a)
```

Important Interview Question

- 1) what are the ways to declare the variable in JS and differentiate them?
- 2) what are the different data types in JS?
- 3) what is the difference between null and undefined
- 4) what is Nan and what is data type of Nan
- 5) what are the different type of operators in JS?
- 6) what are different ways to define function in JS?
- 7) what is the truthy and falsy values in JS?
